CONDENSED INSTRUCT

CONDENSED INSTRUCTIONS.—The rain gauge should be placed on a level and 1 ft. above the ground, quite clear of trees and walls, empty it daily at 9 a.m., and enter it again on the preceding day. Snow should be melted slowly in a closed vessel and the amount entered as rain, an "S" being prefixed. With a low temperature and high wind, it is sometimes blown out of the funnel; then take one-twelfth of the average depth of snow, and enter that as the yield of water—e.g., 3 inches snow = .25 of rain. When there is no rain, a line should be drawn, rather than cyphers inserted.

REGISTER OF RAINFALL IN 1894

Kept at *Lisvane Resr* in the County of *Glamorgan* by *...*
Latitude *...* Time of Observation *9 am* Diameter *5 inches*
Longitude *...* Height of Receiver above Ground *1 foot*
RAIN GAUGE Sea Level *150 feet*

CONDENSED INSTRUCTIONS.—Fix the gauge firmly, with its orifice level and 1 ft. above the ground, quite clear of trees and walls, empty it daily at 9 a.m., and enter it against the preceding day. Snow should be melted slowly in a closed vessel and the amount entered as rain, an "S" being prefixed. With a low temperature and high wind, it is sometimes blown out of the funnel; then take one-twelfth of the average depth of snow, and enter that as the yield of water—e.g., 3 inches snow = .25 of rain. When there is no rain, a line should be drawn, rather than cyphers inserted.

Date.	Jan.	Feb.	March.	April.	May.	June.	July	Aug.	Sept.	Oct.	Nov.	Dec.	Date.
